

Compiling

Obtaining the source

The JWAT source code is hosted on the [bitbucket](https://bitbucket.org/nclarkekb/jwat) repository using [Mercurial SCM](#).

The following command downloads a copy of the project.

```
hg clone https://bitbucket.org/nclarkekb/jwat
```

Compiling the source

Currently JWAT uses [Maven3](#) as the build tool.

Issuing the following command with a valid Maven installation compiles the JWAT project.

```
mvn compile
```

Installing package into local repository

Issuing the following command with a valid Maven installation compiles and installed the JWAT project locally.

```
mvn clean install
```

Currently there are no external dependencies.
