

# Release Test for LDE v1.0.5

This test is designed to ensure that we can export all the previously-rejected (and new) TV programs.

1. Create dumps of current prod data for both BTA and LDE.
  - a. On develro@phoebe run

```
pg_dump -h phoebe -U bta-ro -f bta.dump.txt --data-only bta-prod
p: hwSvaLle
##pg_dump --data-only -h phoebe -U lde-ro -f lde.dump.txt
lde-prod
pg_dump -F custom -h phoebe -U lde-ro -f lde.dump.custom lde-prod
p: 7WVEBTTfIvuh
```

- b. Copy the files over to the test server via your home machine:

```
scp develro@phoebe:*dump* .
scp *dump* bta@iapetus:
```

- c. On bta@iapetus, delete contents of the two databases and restore from the dumps.

```
[bta@iapetus ~]$ psql -d bta-devel
delete from broadcasttranscodingrecord ;
delete from programmediainfo ;
delete from reklamefilmtranscodingrecord ;
DELETE FROM thumbnailextractionrecord ;
\q
[bta@iapetus ~]$ psql -d bta-devel -f bta.dump.txt
```

```
[bta@iapetus ~]$ psql -d larm-doms-exporter-devel -U larmde -h
iapetus -W
p: LVf0lLbb
larm-doms-exporter-devel=> delete from domsexportrecord ;
\q
[bta@iapetus ~]$ pg_restore -d larm-doms-exporter-devel -U larmde
-h iapetus --data-only -W lde.dump.custom
p: LVf0lLbb
```

2. Install LDE on lde@iapetus
3. Set REJECTED exports to PENDING

```
larm-doms-exporter-devel=> update domsexportrecord set state='PENDING'
where state='REJECTED' ;
```

4. Run the consumer.
5. Get new programs by running the producer.
6. Run the consumer again.
