

Compiling JWAT-Tools

Downloading the source

The JWAT-Tools source code is hosted on the [bitbucket](#) repository using [Mercurial SCM](#).

The following command downloads a copy of the project.

```
hg clone https://bitbucket.org/nclarkekb/jwat-tools
```

Compiling the source

Currently JWAT-Tools uses [Maven3](#) as the build tool.

Issuing the following command with a valid Maven installation compiles the JWAT-Tools project.

```
mvn compile
```

Building a runnable package

Issuing the following command with a valid Maven installation compiles and installs the JWAT project locally.

```
mvn clean package
```

The only external dependencies are the JWAT jars.
