

Bitrepository ingester 1.11 release notes

Configuration

- [Change log](#)
- [Download](#)

The following configuration files must be defined in the conf dir:

- **config.properties**: A template file is included. As with all autonomous components, the component takes a single command-line argument which is the path to a properties file containing the configuration. See [common properties for autonomous components](#) for general properties in this file.
- **logback.xml**: Defines the logging configuration. A example file is included. See [Logback website](#) for details.
- **RepositorySettings.xml**: The configuration defined for the Bitrepository used to archive data.
- **ReferenceSettings.xml**: The configuration for the Bitrepositories reference client.

Running

Run from cron job every 5-10 minutes:

```
bin/pollAndWork.sh
```
