Compiling

Obtaining the source
The JWAT source code is hosted on the [github](https://github.com) repository using Git SCM.

The following command downloads a copy of the project.

```
  git clone https://github.com/netarchivesuite/jwat.git
```

Compiling the source
Currently JWAT uses [Maven3](https://maven.apache.org) as the build tool.

Issuing the following commando with a valid Maven installation compiles the JWAT project.

```
  mvn compile
```

Installing package into local repository
Issuing the following commando with a valid Maven installation compiles and installed the JWAT project locally.

```
  mvn clean install
```

Currently there are no external dependencies.
