Freetext search at Netarkivet

Describes the investigation into freetext searching being done at the danish Netarkivet.dk

Current status

After talking to British library regarding there freetext setup based on SOLR and HADOOP, we have decided to try to follow the same path. Hardware has been already been acquired for further testing.

Further details can be found on the internal Netarkivet.dk wiki.

Plans

We plan to start allocating developer resources for setup of the test system in Q2 2012.

Architectural considerations

Documents the architectural considerations regarding the environment which hosts the SOLR search.

Why SOLR

Listes the considerations leading to the choice of using SOLR for the freetext searching.
