

Compiling

Obtaining the source

The JWAT source code is hosted on the [github](#) repository using Git SCM.

The following command downloads a copy of the project.

```
 git clone https://github.com/netarchivesuite/jwat.git
```

Compiling the source

Currently JWAT uses [Maven3](#) as the build tool.

Issuing the following command with a valid Maven installation compiles the JWAT project.

```
 mvn compile
```

Installing package into local repository

Issuing the following command with a valid Maven installation compiles and installed the JWAT project locally.

```
 mvn clean install
```

Currently there are no external dependencies.
