

# Quick Start Manual

This is a short primer to get a simple version of the NetarchiveSuite system up and running. Users with little technical knowledge can evaluate the software by installing it as described here. It uses a pre-built script that starts all components on the same machine. This allows you to start experimenting with the functionality without having to do any more setup than absolutely necessary.

It should not require much technical skill to evaluate the system. What it does require is a computer running a Linux operating system and with sun java 8 or above installed, and the "test" account accessible to you using ssh.

Going through this quick start should take about an hour.
